

Project Name: **Weather Forecast App** (**React + Vite**)

- My Name: **Muhammad Kabeer**
- Role: **Frontend Developer**
- Tech: **React + Vite, API**

Project Overview

- Weather web app built with React
- Displays real-time weather data
- Multi-page responsive application

Features & Tech Stack

- Home page with 4 cities weather
-
- Search any city weather
- Forecast page using API
- About page with project details
- Header & Footer (global layout)

- React.js
- Vite
- JavaScript (ES6)
- OpenWeather API
-
- CSS

Home Page

- Shows 4 popular cities
-
- Quick weather cards
- Simple UI layout

About Page

- Project explanation
- Features summary
- Purpose of app

Welcome to OpenWeather App

Welcome to our Weather App. Our platform is designed to provide accurate and real-time weather information for cities around the world. With a simple and user-friendly interface, users can quickly search for any city and get instant weather updates including temperature, conditions, humidity, and wind speed.

Our goal is to make weather information easily accessible so users can plan their day, travel, or outdoor activities with confidence. The application uses reliable weather data sources to ensure that the information displayed is up-to-date and useful.

This project is built using modern web technologies including React, JavaScript, HTML, and CSS to deliver a fast and responsive experience across devices. The app demonstrates how modern front-end frameworks can be used to create dynamic and interactive web applications.

We are continuously working to improve the platform by adding new features, enhancing performance, and providing a better user experience for everyone.

Forecast Page

- User enters city name
- No data is shown yet
- Shows input field + “Get Weather” button
- Empty/placeholder UI

- Weather data fetched using API
- UI updates using useState
- Displays:
- City name
- Temperature
- Weather condition
